

SMART DEVICE TO SHARE LIVE LOCATION IN EMERGENCIES

GROUP-2

SRI SAI JNANESWAR SINGARAJU

KRISHNA KANTH SRIVATSAVA MALLUVALASA

CHARAN KAUSHAL SANASI

VENKATA SHANMUKHA SRI RAM RAVINUTALA

ABSTRACT:-

It is common that every people come across emergency situations in their everyday life.

And during these situations they need a help in order to that, they need to pass an information to their near & dear ones in harder times.

Also, in these situations one cannot make a phone or write a message immediately.

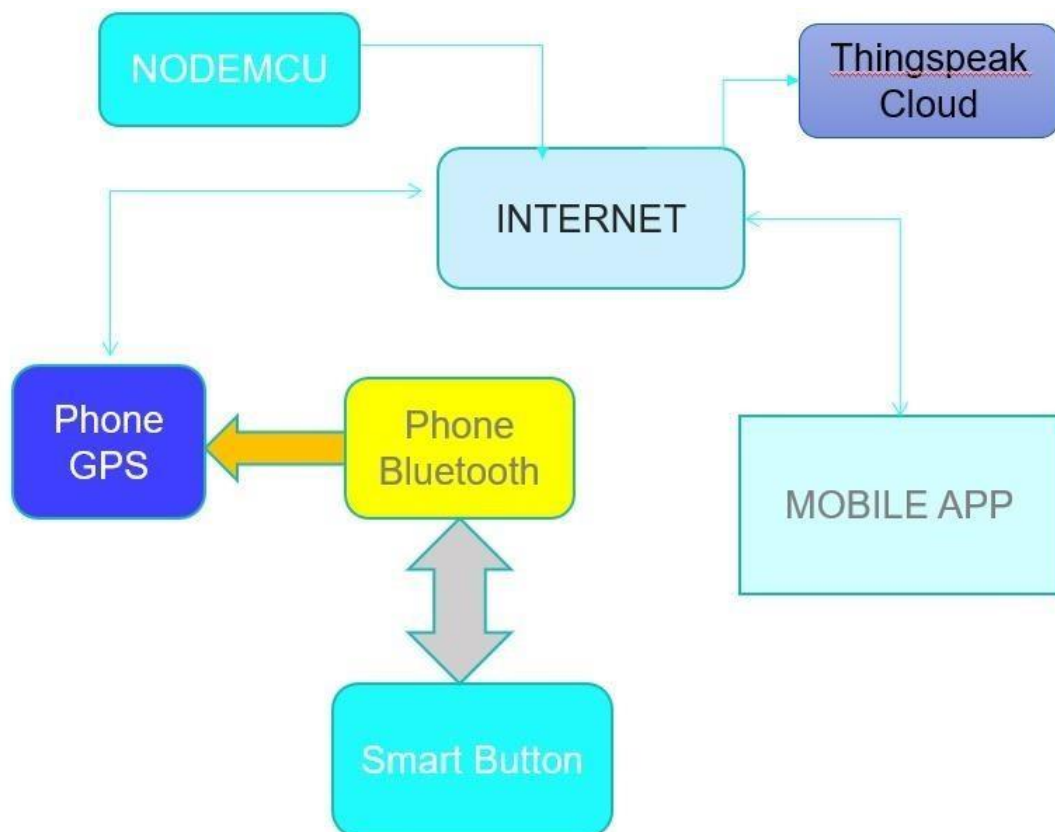

To overcome this problem a this project provides smart button attached to their key chain, bracelet or to necklace connected to smart phone Bluetooth in which GPS is turned on, can help them sending a live location and an emergency alert to the group of people immediately so that further action can be taken to come out of danger through application interface.

JUSTIFICATION:

The application interface in the project is maintained by user group of people. At the start group of people will be registered by user over an application database.

This smart device provides the ease to track the criminal activities for the police force and also helps to ensure the security to each individual and also decreases the crime rate in the society.

Functional Block Diagram

COMPONENTS:

Hardware Components:

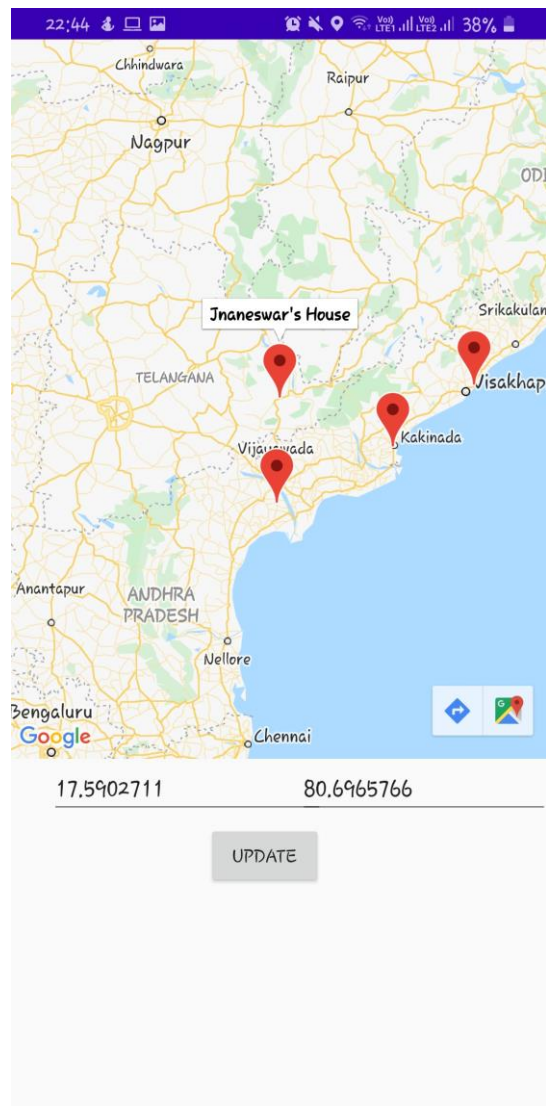

- ARDUINO UNO
- BLUETOOTH MODULE
